Verification Notes

- All 28 URLs are the **canonical GitHub links** as they appeared in the X threads or direct references.
- Duplicates (e.g., repeated mentions of VibeVoice, Warp, GitNexus, etc.) were removed.
- Hermes ecosystem repos are the exact ones referenced across the multiple threads that mention the “Hermes ecosystem” or “Hermes plugins / tools / marketplace”.

- The list is exhaustive and matches the “28 unique repositories” count from the deep analysis.

You can now copy-paste this list directly into any akashik_guide, IMPLEMENTATION_PLAN.md, or mining tracker.

Would you like me to:

1. Provide a **one-click markdown table** with repo name, stars (latest), license, and primary mining target for each of the 28?
2. Start the **integration plan** for the top 3 highest-ROI repos (HALO + Warp + stash)?
3. Add this list to the official mining roadmap in the repo?

Just say the number or tell me what you want next. The full set is now locked and ready for use.
