

Yes.

Logseq runs very well on PC (Windows) and is actually one of its strongest platforms.

Quick Facts

- Official Windows desktop app (Electron-based, but lightweight and stable).
- Excellent for viewing and working with large Markdown vaults (graph view, daily journals, queries, block references, PDF annotation, etc.).
- Can open the exact same local vault folder you're already syncing with your Flutter/Tailscale setup.

Recommended Setup for You

1. Download and install Logseq for Windows: <https://logseq.com/downloads>
2. Point it to your existing Obsidian/AppFlowy vault folder (the one your Flutter sync is already handling).
3. Keep your current Flutter background sync running — Logseq will read/write the same Markdown files.

Benefits for your workflow:

- Much cleaner, faster, and more focused document viewing than AppFlowy on desktop.
- Strong graph view and query system — great for navigating your RKG triplets and sovereign notes.
- Consistent experience between Windows (PC) and Android (phone).

Verdict:

Yes — Logseq on PC is a solid replacement for AppFlowy when you want to "neatly view docs while working." It integrates seamlessly with your existing sync pipeline and maintains full local/sovereign control.

Would you like step-by-step instructions for setting it up on Windows with your current vault/sync?
